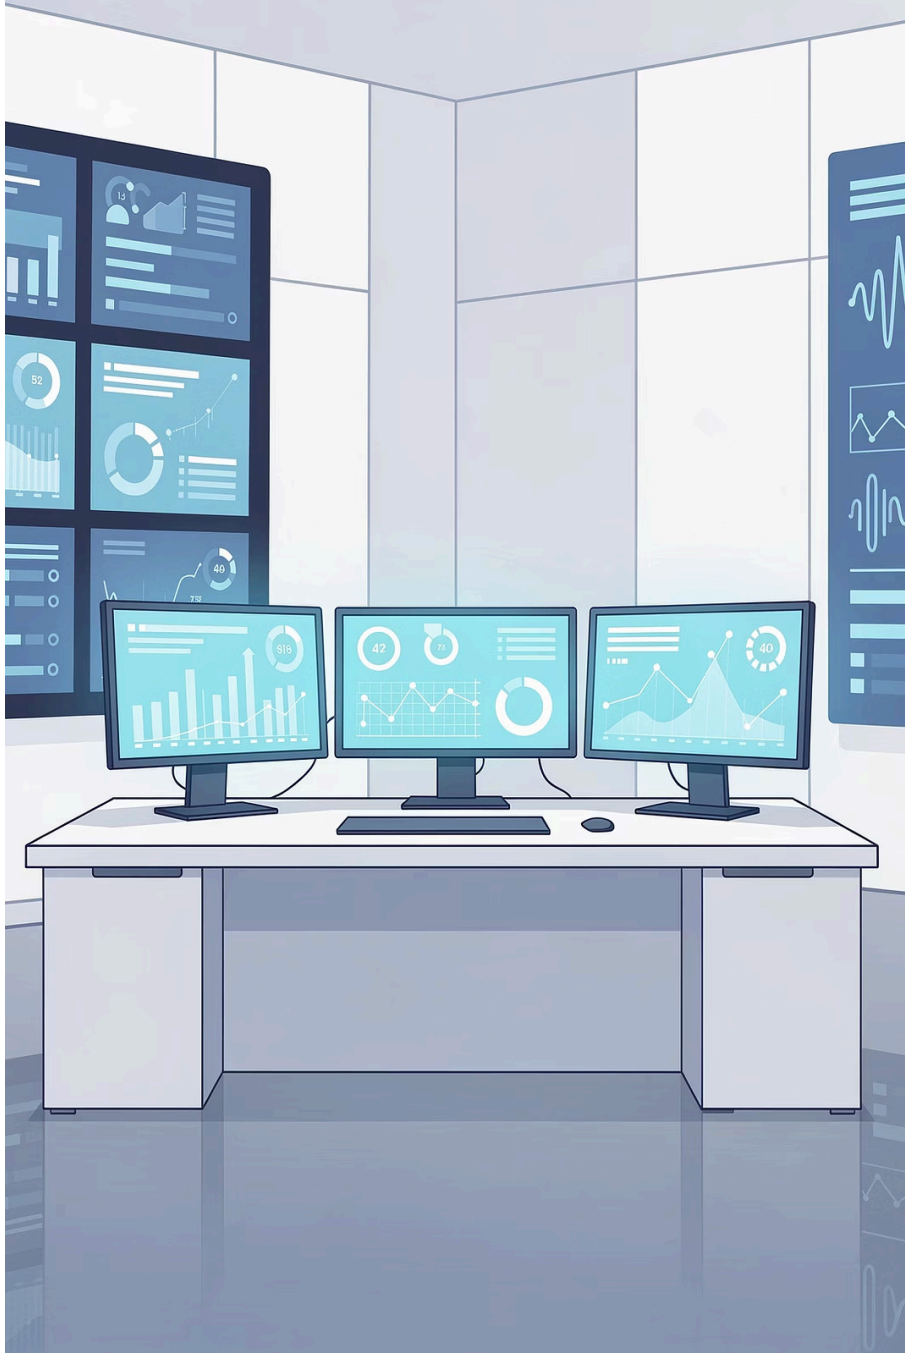
From Job Description to Project Timeline and Tasks

A Technical Product Manager's Journey through ideation, design, and project plan in the media streaming space.



The Spark: Defining the Need

The Job Description

Generated a detailed JD for a **Technical Product Manager in Media** — outlining core responsibilities, technical competencies, and the strategic vision required to succeed in media tech.

Project Ideation: Exploring Opportunities

With the gap clearly defined, five potential projects were evaluated before converging on the most impactful initiative.

1

Content Rec Engine

ML-powered personalization layer

2

Ad Attribution Tool

Cross-platform revenue tracking

3

CDN Optimizer

Latency reduction pipeline

4

QoE Monitor

Quality of experience scoring

5

🏆 Streaming Telemetry Dashboard

Real-time performance monitoring

Winner: The Streaming Telemetry Dashboard was selected for its direct impact on real-time performance monitoring and its ability to enable data-driven decision-making at scale.

Visualizing the Solution: The Design Document

Stream Health

Real-time signal monitoring

Engagement Metrics

Viewer behavior analytics

Error Tracking

Instant fault detection

Performance Analytics

Throughput and latency KPIs

Mapping the Path: Workflow Diagram

A detailed workflow diagram was developed to visualize the entire data journey — from raw ingestion to actionable insight — ensuring alignment across engineering, product, and stakeholders.

Mapping this flow upfront helped the team identify potential bottlenecks early, reducing downstream re-work and accelerating delivery timelines.

Execution: Bringing the Vision to Life

Loading Tasks into Monday.com

With the design document finalized, all features, tasks, and dependencies were structured and loaded into **Monday.com** — creating a single source of truth for the entire development team.

The Result: A High-Impact Streaming Telemetry Dashboard

What Was Delivered

A fully functional, real-time telemetry dashboard that gives streaming teams unprecedented visibility into platform health and user experience.

Data-Empowered Teams

Proactive issue resolution replaces reactive fire-fighting, reducing mean time to resolution (MTTR).

Strategic Optimization

Performance trends inform roadmap decisions, content delivery investments, and infrastructure scaling.

End-to-End Lifecycle Proof

Demonstrated a complete product development cycle — from JD to live dashboard — using modern tools and agile methodology.
